Description

Hello,

On my system :

feature_sefurl don't functions normally.

Important : Subject feature_sefurl : last version 5.1rc1 (current yesterday but may be before). The feature_sefurl don't functions normally (I have not searched why, I don't look at in details to this part).

__ So if the option is activated all url(s) as

site/<page name>

fail and any action, particularly page-object-display (magnifier icon) reaches a 404 error. __

nota : naturally, if the option is not activated the url generated for display of pages is :

__

site/tiki-index.php?page=<page name> __

which functions normally.

trebly

ref-B00805-01

Solution

The error was surely coming from Apache parameters or .htaccess added directives.

So,

- first I add a full auth... sequence to test the .htaccess normal activity
- I create a simple php test file into the tiki directory and define a rewrite rule to access it and test the rewrite engine.

I found the error into the .htaccess file after voluntary generating a 500 error code .

For tiki the management of 404 testing the situation and saying "rewrite engine have failed" would help debugging installations with modified directives into .htaccess, a gooddy.

Workaround

This can occurs if accidentally your .htaccess file is not well treated without generating a system error (500)

The rewrite engine don't functions normally or simply ignored.
