### Description

When importing tracker items from a utf-8 csv file, the first non-ascii character in a field dissapears (except when surrounded by apostrophes).

example:

123;čaj;abc;šša;def

is imported as:

123;aj;abc;aša;def

but this works alright:

123;"čaj";abc;"šša";def

The other characters are fine. Tried with a text field and radio button.  
Using version 5.1.
