Description

In Tiki 3, the feature_category_reinforce allowed Tiki to evaluate category permissions with AND operator, to determine if a user can view an object in the category.

This "Permission to all (not just any) of an object's categories is required for access" option was removed in Tiki 4 & 5. Now Tiki always evaluates category permission conflicts with OR operator.

I would like the feature_category_reinforce option re-instated for Tiki 5 & 6.

Solution

Reinstate the feature_category_reinforce option. If an object is in multiple categories, require that the user have permission to all (not just any) of an object's categories is required for access
