### Description

In earlier Tiki versions, the CAPTCHA for the registration was separate from other anti-bot protection. It was possible to have CAPTCHA protection for some areas (such as comments and trackers) but not other areas (such as registration).

I have several sites that use "Require Admin Approval" and/or passcode options for Registration, so the CAPTCHA is not needed.

In Tiki 6, CAPTCHA was made global — there is no longer any way to have CAPTCHA support for some items, such as comments, but not other items (such as registration).

### Solution

Return to the prior Tiki behavior and allow CAPTCHA support to be selected on a per-feature basis

### Importance

8

### Priority

40
