**Subject**
Wanted: default class for images added in wiki editors

**Version**
6.x

**Category**
- Feature request

**Description**
Images that are added using the wiki editor (anyway the normal editor, I didn't check the wysiwyg editor yet) don't have a default class. This is the simple case of no containing box or anything added along with the image. Therefore it isn't possible for them to have a default style such as margin or border unless it is added manually by the page author. Or if it is specified by the stylesheet (.postbody img or .wikitext img, etc.) then _all_ images in those divs get the treatment, including smileys and external link icons, etc.

I suggest adding a default class like "contentimage" to enable a default style. Page authors can always add a second class if needed.

**Solution**
Modify wikiplugin_img.php, I believe.

**Version:**
- trunk
