Description
    TikiInstall in 6.0 RC1: After pushing Install Button, populates DB and then Blank stops... no other
    page would appear.

    I have tried 2 Browsers: Chrome and IE7. Both on Windws Vista. The problem persists.

    It does this with new database, fresh install. Before I run the install procedure, I make sure the DB
    is totally empty.

    So it is a fresh DB install.

    If I re-run the intaller, some SQL errors appear.

    If I ignore them, then Tiki cannot be used to finishe set up: An error occured while performing the
    request" when trying to access the Tiki.

    The problem persists if using MySQL Improved (mysqlli), and also using MySql Classic

    About the server:
    Running in Windows Plaform
    128 mb ram
    php version 5.2.6
    mysql is ok

I have other tikis 5.3 running in same server with no problem.

Solution
    Closing as invalid per submitter's comment.

Please, check that your server meet the minimum requirements for tiki to work (especially, 32Mb at least for memory_limit in php.ini, and minimum version of php and mysql).
See:
http://doc.tiki.org/Requirements

rodrigososa 09 Nov 10 00:48 GMT-0000

128 mb ram
php version 5.2.6
mysql is ok

I have other tikis 5.3 running in same server with no problem.

Nelson Ko 09 Nov 10 00:59 GMT-0000

Is this site using the site location bar (breadcrumbs)? If so I think there is something wrong with the template (bad line breaks) that cause Smarty to die when trying to recompile the template after a cache clear. Try going into your db and turn the feature feature_breadcrumbs to 'n'. I ran into this the other day. Forgot to commit the fix,

Nelson Ko 09 Nov 10 01:03 GMT-0000

i.e. feature_categorypath instead of feature_breadcrumbs....

Can you let me know if either of that fixes it?

Nelson Ko 09 Nov 10 01:06 GMT-0000

Well, if you are doing a fresh install then the problem I had is not the same as yours. Mine was due to some bad line breaks caused by my cut and paste I think, not inherent in Tiki.

rodrigososa 09 Nov 10 01:12 GMT-0000

before I run the install procedure, I make sure the DB is totally empty.

So it is a fresh DB install.

The problem persists if using MySQL Improved (mysqlli), and also using MySql Classic

Marc Laporte 09 Nov 10 01:28 GMT-0000

Can you try this?
http://doc.tiki.org/Manual+Installation

rodrigososa 09 Nov 10 02:12 GMT-0000

Thanks Marc,

Problem was that FTP FileZilla did´nt copy the file tiki.sql completely, but only part of it to the server.

There should be a cheking machanism for Tiki to aknowledge this. This would be nice.

Thanks to all of you for your support.

Rodrigo
