Description
When logging in wrongly with LDAP (no such user or wrong password), will get:

Fatal error: Call to undefined method Net_LDAP2_Error::getEntry() in /var/www/html/watwiki/lib/auth/ldap.php on line 257

(or white screen unless Error reporting is turned on for all)

Strangely this only happens if you key in a password 5 characters or longer. A shorter password will just show "Invalid password" or "Invalid username" as the case may be.

Solution
backported 7.x fix to 6.x branch for 6.4.
Truncate log messages to 200 characters prior to posting

3661 is a duplicate of this.

akeane 25 Feb 11 01:06 GMT-0000

Setting LDAP Bind Type to Default: Anonymous Bind seems to work around this, if your server will accept them.
