Description
If you have a pagename with a colon in it, like user:person, it will not work because Firefox will think user: is a protocol.

Solution
Will commit after 6.0 release.

> Index: tiki-sefurl.php
> ===
> ======== --- tiki-sefurl.php (revision 27579) +++ tiki-sefurl.php (working copy) @@ -87,5 +95,9 @@ } } } + // Fix links to pages like user:person because Firefox thinks user: is a protocol + if (strpos($tpl_output, '/') === false && strpos($tpl_output, ':') !== false) { + $tpl_output = "./" . $tpl_output; + } return $tpl_output; }

Workaround
Seems to work perfectly now. The colon does get URL encoded and Firefox does not take it as a protocol anymore.
