### Description

The fact (analysis result) : view from the popup of calendar module has no data set up

Details :

When you actions the into modules calendar the event from a date, you get the popup (if prefs) which shows the events of the day, then :

- 1- there is no choice for an event if an alone or several
- 2- the data of the event are not set up
- 3- the action button "view" shows a "pseudo empty event" the lonely data are the default value for a new event...

The function is not completely implemented. Job not ended. Functionality not operational.

It had no time to look at 6.0.

### Solution

It is suitable to finish the work or destroy the function while it can't be used.

### Importance

9 high

### Priority
