Description

Editing a Wiki page i upload an image () directly from the edit page. The code look like this :

```
{img fileId="1" thumb="y" alt="" rel="box[g]"}
```

I have set perm "tiki_p_view_file_gallery" for anonymous.

Unlogged (anonymous) i can't see the picture (tested on several browsers win/mac).

Logged as admin i can see the picture.

I have checked what perm allow the picture to be displayed and found that only when the perm "tiki_p_download_files" is set for anonymous an un logged visitor can see the picture.

Solution

Temporary solution, use perm "tiki_p_download_files" and "tiki_p_view_file_gallery" together.

Proper solution should be to assign the display authorization setting to the correct permission "tiki_p_view_file_gallery".
