### Description

When trying to reset a password for a user you can't click the confirm button on the confirm page. Click the confirm to submit the form gives the javascript error "uncaught TypeError: Property 'submit' of object #<an HTMLFormElement> is not a function" in chrome. This is caused by one of the inputs in the form being named submit. So the function the confirm button calls "javascript:document.forms['confirm'].submit();" is calling the submit input element instead of the submit method of the form. To fix this change the name of the submit button in tiki-adminusers.tpl from "submit" to something else.

### Solution

This is fixed in Tiki 6.
