### Description

tiki-listpages.php accessed via menu item Wiki -> List Pages shows a version column which is populated with valid version numbers.

The Plugin Listpages also shows a version column. However this is NOT populated.

I wanted to use {LISTPAGES(sort=version\_asc max=100)}{LISTPAGES} in an attempt to find the first 100 version zero pages created within structures, which we extensively use in our one name genealogy study site. These would be pages which have yet to have content added by our community members and are in need of our attention.

Our own system is running Tiki v4.3 exhibits this defect. I've shown the defect to exist in v6 using the demo system at <http://php.opensourcecms.com/scripts/details.php?scriptid=63>. Sorry, don't have access to a v5 system.

Happy to help with any testing to resolve this issue,

Martin
