Hi,

Because of partial translations of pages, I use French or English GUI translated and sometimes Spanish, Italian or German.

Because I have defined complementary of elements of GUI dictionary, it is not so evident to take care the whole time with which language you are working and more the associated date format.

It is the reason, while, after, some errors in input dates in a wrong format that I do believe that the current format to input a date should be always repeated into display tpl or input title (displayed).

This is a long and progressive but useful job in my opinion.

Each time I can do it, I do.

Solution

Progressive added updates to input tpl by titles or text displayed with current date format.
