

and

2) <http://mi.solcentral.org/tiki-index.php?page=Sobre+el+Sitio+SolCentral-org>

which shows well.

Note that at the bottom of this page, in the listing of pages related to the category "Contenido Público" (which is the translation of "Public content"), the page "The Essential Function And Life's Purpose" (which is the translation of "La Función Esencial y El Propósito de Vida") that is the page 1)... Then if you click on it, it will not show presenting you with the login invitation, although it is shown in the list as categorized "Public Content".

Other extraneous behavior is that when when you use the Plugin Toc to show the structure, only shows some wikis on some structures, and on some other structures doesn't show any wiki.

I have used this: `{toc structId="26" order=asc shownum=1 type=fancy }` in the wiki:

<http://mi.solcentral.org/tiki-index.php?page=e-Books%20Index>

Actual estate of config is:

For anonymous:

If Perms on wiki: "La Función Esencial y El Propósito de Vida"

La Función Esencial y El Propósito de Vida Anonymous tiki\_p\_view Categoría: Public Content

La Función Esencial y El Propósito de Vida Anonymous tiki\_p\_view\_backlink Categoría: Public Content

La Función Esencial y El Propósito de Vida Anonymous tiki\_p\_watch\_structure Categoría: Public Content

La Función Esencial y El Propósito de Vida Anonymous tiki\_p\_wiki\_view\_attachments Categoría: Public Content

La Función Esencial y El Propósito de Vida Anonymous tiki\_p\_wiki\_view\_comments Categoría: Public Content

Category Perms of "Public Content" are

for anonymous group perms that are ON:

Can view wiki attachments and download (tiki\_p\_wiki\_view\_attachments)

Can view page/pages (tiki\_p\_view)

View page backlinks (tiki\_p\_view\_backlink)

Global Perms are:

on Wiki:

Can view wiki attachments and download (tiki\_p\_wiki\_view\_attachments) is ON for Anonymous

Can view page/pages (tiki\_p\_view) is OFF for Anonymous

View page backlinks (tiki\_p\_view\_backlink) is ON for Anonymous

Fixes tried:

Have tried the opposite: allowing everything to be shown to Anonymous, and then restrict on pages that should be hidden with a "invisible" category with perms tiki\_p\_view OFF for anonymous group.

And it didn't work since - again - for some wikis worked, and for some others not. Even if they are identical.

Using:

Tiki 6.1 fresh code install, on past 6.0 db updated to 6.1.

Workaround

The problem seem to be with accented (haven't tried with other special characters) names like:

"La Función Esencial"

for it work it should be replaced by :

"La Funcion Esencial" without accented characters.

The ' character is not allowed also. So something like "Central Sun's mission" will not work.

Also in structures:

All main wiki pages of each Structure should be renamed.

This also affects Plugin TOC

1. by not showing wikis in structures that have accented names, and the wikis that are down in the tree are also not shown

Note:

1. I haven't seen what happens when having Categories with Accented names.
2. Preview of wikis while editing doesn't show if they have accented names.

## Comments

**Louis-Philippe Huberdeau** 30 Dec 10 01:56 GMT-0000

The link points to

<http://mi.solcentral.org/tiki-index.php?page=The+Esestial+Function+and+Life%27s+Purpose+>, indicating an extra space at the end.

There seems to be a problem, but I don't have enough details here to work with. I did hear something similar before, but never managed to reproduce it.

My initial feeling is that this is related to case sensitivity or some other sort of manipulation. Could you provide a more complete list of the page names and the links they point to, both for some that work and some that don't?

**rodrigososa** 30 Dec 10 17:06 GMT-0000

Louis,

Thanks for your prompt answer. We where synchronized ... so just found the problem, playing with different page names.

At the moment the problem seem to be with accented (haven't tried with other special characters) names like:

"La Función Esencial"

for it work it should be replaced by :

"La Funcion Esencial" without accented characters.

The ' character is not allowed also. So something like "Central Sun's mission" will not work.

Also in structures:

All main wiki pages of each Structure should be renamed.

This also affects Plugin TOC

1. by not showing wikis in structures that have accented names, and the wikis that are down in the tree are also not shown

Note:

1. I haven't seen what happens when having Categories with Accented names.
2. Preview of wikis while editing doesn't show if they have accented names.

Hello,

I went through all the code related to this and could not find any inconsistencies in the way things are handled. I created a new install and recreated your set-up including pages containing accentuated characters. No luck. The permissions seem to apply without any issues.

Would you be willing to provide more information about your set-up, including a database dump so I can try to identify the issue?

Contact me directly at lph at tiki.org

Tiki 8 introduces several fixes for non-english characters, and it may solve these problems
