Description

as described in the topic

if you are trying to edit a page in a multilingual wiki where you have currently a language other than english selected (I only have german allowed in my tiki) you only see something like this (complete html output):

```
<div class="floatright"> <a class="previewBtn" title="Vorschau Ihrer Änderungen." href="/test/tiki-editpage.php?page=test_de"></a></div> <h1><a class="pagetitle" href="/test/tiki-editpage.php?page=test_de">bearbeiten: test_de</a> </h1> <!-- templates/tiki-preview.tpl start --> <div class="wikipreview" style="display:none;" id="autosave_preview"><div> <div style="float:right;"> <select name="diff_style" id="preview_diff_style"> <option value="" selected="selected">Vorschau</option> <option value="htmldiff" >HTML diff</option> <option value="sidediff" >Side-By-Side Vergleich</option> </select> <a title="Popup preview" onclick="ajax_preview( 'editwiki', autoSaveId );$('#autosave_preview').hide();return false;" href="/test/tiki-editpage.php?page=test_de"></a> <a title="Close preview" onclick="$('#autosave_preview').hide();return false;" href="/test/tiki-editpage.php?page=test_de"></a> </div> <h2>Vorschau : test_de</h2> <div align="center" class="attention" style="font-weight:bold">Hinweis: Dies ist nur eine
```

Vorschau und wurde noch nicht gespeichert!</div> <div class="wikitext"> </div> </div> </div> <hr style="clear:both; height:0px;"/> <!-- templates/tiki-preview.tpl end --> <form enctype="multipart/form-data" method="post" action="tiki-editpage.php?page=test_de" id='editpageform' name='editpageform'> <input type="hidden" name="no_bl" value="y" /> <table class="formcolor" width="100%"> <tr> <td colspan="2"> <input type="hidden" name="page" value="test_de" /> <div id='edit-zone'> <div class='textarea-toolbar' id='editwiki_toolbar'>

Workaround

Turn on PHP Error reporting level in the general preferences menu

Can you reproduce with a language other than German, and with version 6.1?

DesertWolf 17 Jan 11 09:41 GMT-0000

i turned off the error reporting and cleared the cache and after that i got the error i told you with the german language.

i added french and polish and they don't show any problems, seems like it is a german language problem

and tiki version is 6.1 running on a windows7 xampp environment

Philippe Cloutier 17 Jan 11 19:01 GMT-0000

With PHP error reporting, do you see errors that may be relevant?
