Description
1. 3757 ADD : Language Custom and all language files system holding - Proposal MOD ADD for
Trunk 7x

As I can't access in "edit/delete" mode to #3757, I add this one for complements.

The problem of access to whishlist is reported in : #3767

Complements :

To be able to hold FIX in language files without direct corrections

The fact to have to commit the full language.php for a language when we have to make a change
into an invalid translation has multiple not suitable effects :

- you can't follow changes
- you can't check and think about
- you can't validate

The new changes with array fusion make forbidden the fact to alter the (system) language with
custom.php or other

I enhance my proposal with the FIX-*-language.php files with are merged and not fused with after

all others.

The final aim is to make a merge and automatic rewrite of language.php from the merged array "$lang_$lg" from validated fix.

To files are naturally sorted (normal - UTF8):

1. language.php or SYSTEM-*-language.php
2. custom.php or CUSTOM-*-language.php
3. FIX-*-language.php

the "*" is a part of the name which has meaning (content) and can be sorted.
particularly non yet translated parts can be separated from main SYSTEM and marked.
Progressive and controlled (repartition of job for example) translation can be done.

Best regards

Trebly
(ref:B10126-03)

PS : I am particularly sensibles on this because I made each day changes and I think not efficient to commit the full French language each day but a little FIX with what+date seems a good solution.
