Rating

★★★★★ (0) ?

Description

Verified using Tiki 6.1:

I attempted to create a new page within a structure, by using the structure navigation bar (add page). Tiki creates the page, but does not place it within the structure. Using the "add as child" option makes no difference.

This worked correctly in 5.3

Solution

Fix the add page to structure funtionality.

Have tested it in 6.2:

It works!

Makes Siblings and children 😊

Thank you! This feature is very important for me.
