Description

This bug is seen by our IE 8 clients. We are running Tiki 6.2 (clean install), on a Windows 2003 Server, Apache 2.2.16 w SSL, PHP 5.3.3, remote MySQL 5 database.

When our users try to edit their pages either in WYSIWYG or normal mode, their editor text box is half the width that it should be. They need to use the dragger to make it wider. If we edit in Firefox then the editor is the correct width.

Since IE is our corp standard our users need to be able to add files using that browser. Also, this is the same problem we had in Tiki 5.x and we were hoping 6.x would have fixed it.

Thanks,
Tim
