Description
Complete error-message is:
Notice: Undefined variable: modcatlist in /modules/mod-change_category.php on line 72

Steps to reproduce:
- assign mod-change_category.php to a column
- go to Admin->General or tiki-print.php
- see the error message

Editing my wiki HomePage I even had Tiki dieing completely with errors:

Warning: Cannot modify header information - headers already sent by (output started at /home/amette/public_html/tikiwiki-BRANCH-1-9/modules/mod-change_category.php:72) in
Solution
I think that count($categs) on line 31 in the module doesn't give results for those pages - this could be solved in the module easily...
Didn't touch it though - perhaps there is some more generic solution in tikilib ?!

Ok, after adding the edit-wiki-page error above: perhaps it's better to solve it in the module itself?

I tried on [http://dev.tikiwiki.org/](http://dev.tikiwiki.org/)

Module appears on [http://dev.tikiwiki.org/tiki-admin.php?page=general](http://dev.tikiwiki.org/tiki-admin.php?page=general) which makes no sense because there is nothing to categorize but it doesn't break anything...
