Description

When editing files in the notepad, I periodically notice strange conversions of characters into what appears to be coded versions of the said symbol. This seems to get worse with each iteration of editing a note. Example:

Versions:

1. (Unsaved Original Version) I "can't" "code" & I can't \_\_think\_\_.
2. (Saved once, and then reopened) I "can't" "code" & I can't \_\_think\_\_.
3. (Saved previous version, then reopened) I "can't" &#039;&#039;code&#039;&#039; & I can't \_\_think\_\_.

I would suspect, as an uneducated guess, that there is a problem with the substitution routine involved in loading the notes..

#### Comments

TheOnlyMerlin 24 Mar 11 10:50 GMT-0000

I was trying to promote a notepad-centric approach to editing on my site, and while I was trying to take my own advice, I discovered this problem. Until this is fixed, a notepad centric approach is significantly less feasible.

Note: The idea of this approach being that you make edits of wiki pages on your notepad, and once it is good to go, you transfer that edit over to the real version. Mainly handy for first versions of pages, and complicated edits.
