Description

Mail notification not showing wiki page name and url.Problem in objectlib.php.

Solution

Objectlib.php force itemId from select in tiki_objects table to be "INT" but this is not true for wiki pages (in this case, itemId is the name from the page).

It worked when function get_object was changed to:

```
function get_object($type, $itemId) {  
    $query = 'select * from `tiki_objects` where `itemId`=? and `type`=?';  
    if ($type "wiki page" or $type "wikipage" or $type == "wiki_page") {  
        $result = $this->query($query,array($itemId, $type));  
    } else {  
        $result = $this->query($query,array(int) $itemId, $type);  
    }  
    return $result->fetchRow();  
}
```
