Description
    Hello,

    My english is very basic.

    I am working into corporative network with proxy server conection. This conection required User
    and Password. But into TikiWiki's Proxy Configuration is not requiered.

    For this reason I am not conect to download profiles from http://profiles.tiki.org/profiles.

    I can not install de Profiles. How I can resolve it?

    Help me,

    Bye.

Hi ELias:

I looked at your report because we are behind a proxy in our research institute, but luckily, without authentication.

First, ensure that you did write the proxy setting in tiki without http:// at the beggining.

then, for authetntication, you can try tweaking tiki code, since it seems that it shouldn't be that difficult to add it yourself, maybe:

Using proposals/6x:

lib/pear/HTTP/Request.php has info about $_proxy_user and $_proxy_pass (lines 184 & 190 in proposals/6x, respectively)...
but that info is not fetched in lib/prefs/proxy.php, not used, of course, in lib/tikilib.php

Can you try adding that info to theses files yourself?
You can request more specific halp to some consultant, I guess:
http://info.tiki.org/Consultants

Good luck
