

```
*all the way out
```

this example displays for us as

```
blah zaa zaa

  This is a list

    now indenting the list
    blah

back out

  back in

    really far in
all the way out
```

Sometimes there is a break, other times there is not. If I Preview while editing it looks fine. If I edit the HTML via the Source WYSIWYG view and save then it looks fine until I save it in WYSIWYG mode again.
