Probably after r15010 `get_strings.php` is collecting code from Smarty template as strings to be translated like the one below:

"</div>\n\t</div>\n\t\t\t\t\t{/if}\n\t\t\t\t\t{/foreach}\n\t</div>\n\t{/tab}\t\t{/if}\n\t\n\t\t\t\t\tif
 \\\\$prefs.feature_display_my_to_others eq 'y' and \\\\$infoPublic eq \"y\"}{tab name=\"{tr}User
 Contribution"

The regular expression used to parse the source files in search of translatable strings needs to be fixed but it is a bit scary to change it without unit tests. It is too easy to introduce another regression bug fixing this one.

Fixed after r35220
