Description

I need to set three group of user.

Each user is member of only one group.

Each group should not have access to other groups contribution

So i've decided to create 3 categories, to set specific permission on each categorie for one group.

I add a module category to show category for user. But i always get the message "You do not have permission to use this feature".

I'm not able to create page with a user.

Really need help !!

Try first to assign all the required global perms, then "take away" perms for the specific category that is more secure.
