Imagick Scale Image failure after upgrade, showing icon instead of picture

Description
After upgrading from 3 to 6, resizing of images fail. I tracked it down to Imagick's `scaleImage` function resulting in broken image, hence all that is shown is the GIF icon. This is the case when using the `{img` tag with size set.

Solution
Need proper fix, by making option to not use Imagick but GD instead. Workaround to force GD instead of Imagick is as follows:
If Imagick is installed, use Imagick, otherwise use GD.

```php
// This assumes Imagick is better than GD (which does not handle transparency in gray PNG), so try to find it first

if (class_exists('Imagick')) {
    $detected_lib = 'imagick_new'; // Imagick 2.x
} elseif (function_exists('imagick_rotate')) {
    $detected_lib = 'imagick_old'; // Imagick 1.x
} elseif (function_exists('gd_info')) {
    $detected_lib = 'gd'; // GD
}

if ($detected_lib != '') {
    // Load the detected lib
}
```
