### Description

Group watches works in 6.2, but in 7.1. The settings do not save. When the group watch is selected the response shows that the group is set. But when navigating back to the settings page, none of the groups are selected.

Hello all

I see this problem too - the whole "group watch" feature seems to be broken in 7.1. Has anyone there are tiki.org spotted this bug report? It seems like an important one to fix.

Many thanks

Adam
