Not sure if it matters, but perhaps it might be good to check if `(is_object($object))` ? I mean, could it be that sometimes object is an array?

Have you `print_r($object)` to see what is in it to make sure that when it is an array it does in fact have contents?

gaxweb 04 Oct 11 12:35 GMT-0000

Fixed in r37944 on trunk. Used casting instead.
