Description

I defined a category Helpdesk and assigned it to a structure Helpdesk FAQ.

Also i defined a group Helpdeskadmin, which useres should be able to add new pages to the structure.

Now if a helpdeskadmin try to Add a page to the structure (with the button on the top of the wiki page with the toc), he must have global permission `tiki_p_edit`, not only for that categorie.

My analysis:

In `tiki-editpage.php` there are to permission tests:

First:

```
// Permissions
$tikilib->get_perm_object($page, 'wiki page', $info, true);
if ($tiki_p_edit !== 'y') {
...
$smarty->assign('errortype', 401);
$smarty->assign('msg', tra("You do not have permission to edit this page."));
$smarty->display("error.tpl");
die;
}
```

Second:

```
//Is new page to be inserted into structure?
```

```
if $_REQUEST%22current_page_id%22 {
...
$structure_info = $structlib->s_get_structure_info($_REQUEST'current_page_id');
if ( ($tiki_p_edit != 'y' &&
!$tikilib->user_has_perm_on_object($user,$structure_info%22pageName%22,'wiki
page','tiki_p_edit')) || $tiki_p_edit_structures != 'y' &&
!$tikilib->user_has_perm_on_object($user,$structure_info%22pageName%22,'wiki
page','tiki_p_edit_structures' ) ) {
$smarty->assign('errortype', 401);
$smarty->assign('msg', tra("You do not have permission to edit this page."));
$smarty->display("error.tpl");
die;
}
```

The first one is the problem because it asks only for global permission, i think.

Solution

Perhaps the first permission test can also ask for the permission defined in structure or categorie?
