- ● Publish Date field skews on post preview where site default time zone is UTC and user time is UTC or inferred

Description

When configuring a banner, it is possible to set a to- and from-time when the banner can be displayed. Setting and saving these times work OK.

The times are stored as specified (assumed local time for server)

However, when the settings are reloaded/reviewed, the times seems to auto-adjust the times, based on an assumption that the times are stored in UTC.

I am in the GMT+2 timezone, thus both times are incremented by 2 hours when they are reloaded.

Unless this error is detected and manually corrected before re-saving, the time settings will be altered. This will occur every time.
