## Comments

Philippe Cloutier 02 May 12 15:10 GMT-0000

Could it be that the problematic database once ran trunk under MySQL 4?  
The problematic column was added in r27056, but only for new installs, by error. This was fixed in r29672, which added the column but conditionally, to avoid causing errors on recent installs that already had the column. Did 20100927\_better\_column\_fix\_tiki run for you? If so, try removing it from tiki\_schema and re-running the upgrade, that should fix.

Lusserall 03 May 12 22:57 GMT-0000

The problematic database did not run trunk atleast not the version used on my hosting.  
It did run under MySQL 4 and has been upgraded since tiki 4.1.  
Gues 20100927\_better\_column\_fix\_tiki did not run because the upgrade from 7.2 to 8.2 gave the error  
Operations failed: 1 SQL queries.

```
ALTER TABLE tiki_shoutbox modify tweetId BIGINT(20) UNSIGNED NOT NULL default 0  
Unknown column 'tweetId' in 'tiki_shoutbox'
```

I added the column manually that fixed it for me.  
I don't have database backups from a half year ago so i,m not able to test this further.

Philippe Cloutier 04 May 12 00:08 GMT-0000

Thanks for the detailed answer. I was confused, you don't need to have an install upgraded from trunk to get this. What may have happened is the RDBMS was still at MySQL 4 when you upgraded to Tiki 6 or above.

But, I believe we saw this problem on an install which was running MySQL 5.0 when it was upgraded to Tiki 6. So I'm not sure what happened. If anyone gets that when upgrading to Tiki 6 or above under MySQL 5, please report and report if you see other errors before this one.
