Description

Hi,

The HTML Purifier feature, when enabled, seems to clean really too much the HTML tags.

* when used with Allow HTML feature and there are some html codes on the page

* when used with Allow HTML feature and some html codes are encapsulated with PluginHTML

It is impossible for exemple to use tags such as <script>, <form>, <input type>

The only case where the HTML Purifier feature was not problematic was:

Allow HTML disabled + HTML Purifier enabled + html code encapsuled in PluginHTML

I finally disabled HTML Purifier, and I didn't have any problem anymore with Allow HTML enabled and/or with PluginHTML.

The problem with HTML Purifier can be easily reproduced in a wiki page by inserting any HTML code for a form, and/or by inserting some javascript parts.

Best regards,

Yannick
