Description

No html links are shown for uploaded images in the file gallery. Only wiki display and download links appear in the "Additional Info" screen.

Users just have to "know" that to display in html you must use /displayFilenumber

Also, there is no direct way to get BACK to that Additional Info screen from the gallery once the file is uploaded. i.e. it does not appear in the image's 'tool' pop-up menu, which just lists for us Download, Replace, Properties, Open in WebDav, Email this, and Delete only. No way to get back to the "additional info" screen.

Also, the images don't have a suffix when the URI format is /display123 and this causes problems with some software which expects one.

The old image galleries had an html link for the images.
