Description

The tabs in the administrative interface use an onclick to run some AJAX code to change the interface. The problem is that they don't work in Chrome 17. They seem to work fine in Chrome 16.

More strangely, the method signatures of the tikitabs function actually appears quite different between the two browsers.

On Chrome 17 it is

```
function tikitabs(focus,max,ini) {  
var didit = false, didone = false;  
if (!ini) {  
ini = 1;  
}...
```

```
function tikitabs( focus, tabElement) {
```

The problem appears to be that the ini variable is not set, so it we set the ini to 1, then it skips down all the way to if (didone && ...) which gets bypassed, and we exit right away.

Why do you have different code for different versions of the same browser?
