Description
While CAS authentication is great, it allows multiple users to login if you have a widely common CAS server.

For example, SecurePass 1 strong authentication allow ALL securepass users to login through their CAS.
The need is to optionally limit which users or users domain can login to tikiwiki through CAS.

1 www.secure-pass.net

Solution
A quick and dirty solution is to do a regex check on the CAS username. For our purposes, on
userslib.php (ver 8.2) around line 470 add the following:

469a470,477
> 
> // Gippa
> // If user is authenticated, but not belong to us, fails
> elseif ( $userCAS && !preg_match("/(.*)@mycompany.com$/", $user) ) {
> return array(false, $user, $result);
> }
>
>
That is a quick and dirty patch. You can create an input box to check for regex or domains.
Thank you very much.

Best regards,
Giuseppe
