As per Tiki23, unlike the software, Tiki doesn't display a list of all available modules  
You need to check the documentation <https://doc.tiki.org/All-modules> or eventually to add a module and then review the list of modules in the dropdown.

Both method are not perfect but Tiki as a very long list of modules and it is unclear how to display them with the rest of the Admin Modules informations.

Tiki doesn't have a listing of used or unused modules.

How do you see a possible improvement in Tiki23+ ?
