Description

LDAP group synchronisation is dependent on the "corresponding user attribute", a setting which is only needed if an external directory is used for group synchronisation.

The fix is simple - the combination of if-staments just need to be adjusted slightly - see patch.

Solution

lib/userslib.php

```
1174c1179 -if ($prefs['syncGroupsWithDirectory'] == 'y' &&
$userattributes[$prefs['auth_ldap_group_corr_userattr']] != null) { - // sync external group
information of user - $ldapgroups = array(); - - if ($prefs['auth_ldap_group_external'] == 'y') { +if
($prefs['syncGroupsWithDirectory'] == 'y') { + // sync external group information of user +
$ldapgroups = array(); + + if ($prefs['auth_ldap_group_external'] == 'y' &&
$userattributes[$prefs['auth_ldap_group_corr_userattr']] != null) {
```
