Description

When using the UserList plugin, the links on the user names leading to their personal information pages, are shown and hidden depending on privileges of the logged in user. Unfortunately, the logic is reverse of what it should be.

Correct logic is: show links for all users that when either A.) You have admin privileges. B.) User listed is yourself. C.) User listed has chosen to make his profile information public.

Current logic is: show links when A.) You have admin privileges. B.) User listed is NOT yourself, AND user listed has chosen NOT to make his information public.

Solution

in the file /lib/wiki-plugins/wikiplugin_userlist.php, change the line 153 from:

wikiplugin_userlist.php line 153 (BUG)

```
if ($user_information == 'private' && $row['login'] != $user) {
```

to

wikiplugin_userlist.php line 153 (FIX)

```
if (!$user_information == 'private' && $row['login'] != $user) {
```

and the trick should be done.

While you're at it, the sister file `/lib/wiki-plugins/wikiplugin_realnamelist.php` can be fixed as well.

Change line 153 from

wikiplugin_realnamelist.php line 153 (BUG)

```
if (isset($user) && $user_information == 'private' && $row['login'] != $user) {
```

to

wikiplugin_realnamelist.php line 153 (FIX)

```
if (isset($user) && ($user_information != 'private' || $row['login'] == $user)) {
```

I have confirmed and replicated this bug in both Tiki 9 and Trunk. The suggested patch has been applied and committed to both Tiki 9 and Trunk

Pascal St-Jean 13 Apr 12 20:27 GMT-0000

Thank you for your patch submission.
