Description

In 1.9.2, the ability to create PDF files from structures is fixed (which is great). All files in the structure are now automatically added to the include list when the PDF icon is clicked while in an active structure.

However, the resulting file is badly named. For example, in a structure consisting of:

test structure edit

* 1 numbers x edit

o 1.1 one x edit

o 1.2 two x edit

* 2 colors x edit

o 2.1 blue x edit

o 2.2 green x edit

(http://gaeacoop.org/tiki/tiki-index.php?page_ref_id=1)

the resulting PDF file is named "green" rather than "test_structure.pdf" or "test structure.pdf". Not only is this generally confusing (naming the pdf file for the last page in the structure is pretty counter-intuitive), but the lack of the PDF extension prevents the browser from automatically opening the file. I was able to force the file to open with Acrobat Reader 5.0 for Macintosh on OSX 1.3, but only after setting the file filter to "all files." Many less experienced users would have stalled before this.

The PDF generation should default to the name of the structure plus the ".pdf" extension, and probably should also allow this file name to be manually changed before the PDF is generated.

Solution

Closing bug as PDF generation is cancelled as of 2.x and only security fixes will be released for the 1.9 branch.

Check the PDF docs for more info.

We will be using a new PDF lib which is a lot better (I am told)

droald 02 Aug 06 12:41 GMT-0000

PDF-generation does not work at all in Opera 9. The pdf generation page is shown, but when you click "create" nothing happens. This works ok in Firefox, although the formatting could be improved.
