Description

Depending on the width of a user's browser window, it is possible for a button to wrap to the next line when the user hovers on the button. This makes clicking the button challenging.

We did not see this behaviour with v4.3, only since upgrading to v6.7

Solution

Per ricks99 for theme TheNews, add the following to Custom CSS on tab Custom CSS within Admin
-> Look & Feel

```
input.button:hover, button:hover, input[type="submit"]:hover, .button input:hover, .button:hover,
.calbuttonbox a:hover { background: none repeat scroll 0 0 #FBFBFB; border: 1px solid
#AAAAAA; color: #000000; font: 0.8em Arial,Helvetica,sans-serif; text-transform: uppercase; }
```

Many Thanks to ricks99 for the solution to our problem
