Description
    A user registered himself, and chooses as login a name with uppercases (Stephane).

    Two newsletter are created, with different subscriptions:
    1) group subscription, including the aforementioned user
    2) user self subscribe

    When sending newsletter 1, the email is sent to the user.
    When sending newsletter 2, the email address of the user is not found in the database and cannot be
    sent (despite finding the correct number of subscribers)

    I traced it to two libraries:
    first in ./lib/newsletter/nllib.php, in the function get_all_subscriber, we can see in the first part of the
    function how the email adresses are collected based on the subscribed groups. The select is mostly
    direct, and gets the correct information.
    Later in the function (line 215 and following), individual users are added to the list of emails. Line
    218, the "email" from the table tiki_newsletter_subscriptions (which is the login for registered users)
    is brought to lower case. (Note: I'm not sure, but it could be that the subscription module also puts
    the login in lower case in that table...)
    Finally, line 232, the function get_user_email uses as parameter this lowercase login name to find
    out the actual email address.

    This function is defined in the library ./lib/userlibs.php on line 5581.

This function compares the login passed as parameter to the login in the users_users table, but with a "binary" comparison, i.e. case sensitive! Removing the binary keyword lets the newsletter module find the correct user, and then its email.

Solution

Update: actual fix is better done in /lib/newsletter/nllib.php
It has been done in trunk, commit 41587.
Login handling is still case sensitive, now the newsletter handle it correctly. Will be backported to 9.x when 9.0 is out.

I propose to change the login comparison to a normal (non-binary, case-insensitive) comparison. Only question remaining: there was surely a good reason to have a binary comparison, and what else would break if we remove the binary comparison?

Dear grundsch

I did send your question to the developers list (http://tiki.org/Lists) and some developers provided some feedback to you there:

> *+1 for case insensitive logins and removing the binary comparison here.*

> *But... 2 logins identical with different cases are ... very rare*

So it seems that it's fine that you go forward with your proposed solution.

Can you commit this yourself to trunk, and once 9.0 is out, backport to Tiki 9.x?

See http://dev.tiki.org/Commit

Thanks

grundsch 23 May 12 14:12 GMT-0000

Hi Xavi,

thanks a lot for checking it with the dev group! Looks good indeed.
I will read the doc to commit, if I get stuck I will allow me to PM you. 😃
regards,
Stéphane

Xavier de Pedro 23 May 12 16:22 GMT-0000

ok, thanks Stéphane. and Welcome on board 😃
