Subject

Need a way to detect when two wiki pages have the same alias (because the redirect fails)

Version

9.x

10.x

Category

- Conflict of two features (each works well independently)

Feature

Wiki (page view, edit, history, rename, etc)

Wiki Syntax (text area, parser, external wiki, etc)

Description

Conflict detection when page is saved would be nice too. Often happens when people are translating pages.

It should offer disambiguation page...

For example <http://dev.tiki.org/Download> gives an error but it does contain

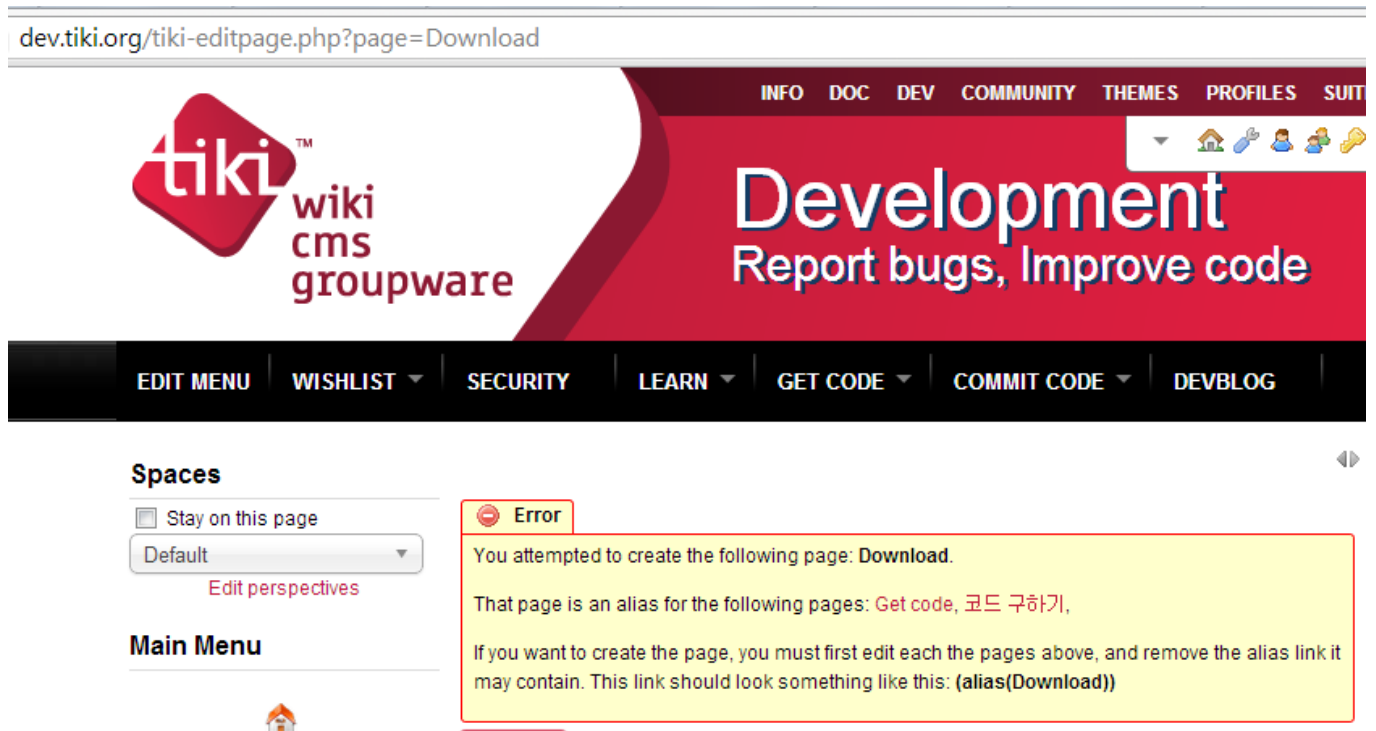

(alias(Download))

As you can see here:

<http://dev.tiki.org/tiki-pagehistory.php?page=Get+code&source=0>

So the page is not found, but when you try to create, you get:

So clearly it exists...

Solution

I had fixed the issue in 12x.

Please check this commit id: 48761

Also backported to 9x and 10x.

9x -> r48763

10x -> r48764

Mani, can you try to see if it's possible for the alias detection to determine if there are multiple aliases (vs. page not found). If possible it should show an error similar to the one when you try to create the page.

However, if it is difficult to detect that there are multiple aliases, let us know.

Marc Laporte 27 Nov 13 20:29 GMT-0000

Hi Mani!

I just tested on dev.tiki.org which is at r48769 and should contain your fix.

I translated Tiki12 to Tiki12-fr

Both pages have "release process 12" as an alias.

If you try to create the page, you will see:

<http://dev.tiki.org/tiki-editpage.php?page=release+process+12>

But visiting <http://dev.tiki.org/release+process+12> should offer you a disambiguation page.

Thanks!

Hi Mani,

I am reviewing your r48761 and trying to understand what it fixes. Can you explain what is the logic behind `check_alias` and why you added it in the `create_page` function? Thanks

Nelson Ko 28 Nov 13 01:00 GMT-0000

Hi Mani,

It looks like you are trying to prevent creating a page with an alias link to to the same page that is already an alias to another page. There problem with this approach is that it does not take into account the translation use case. For the translation use case you cannot use this same approach, it

will break the translation feature.

Marc, not sure what you think of Mani's "feature" - it does prevent manual creating of wiki pages with an alias link to a page that is already an alias but it is not thoroughly tested. Foe example if you create tiki12b and put the alias to "release process 12" then it will show an error message when you try and save. Not sure if it gives you a chance to fix it without losing what you typed.

Marc, do you have time to test thoroughly - Should he revert?

Perhaps this bug should be reassign to someone else (I unfortunately have no time thursday). Maybe we can fix it for 12.1 with more testing.

manivannans 28 Nov 13 11:10 GMT-0000

Hi,

Sorry I missed to test with page translation. We can allow same alias names only for translating pages.
for example,

Tiki12 & Tiki12-fr have same alias, then if the site lang is english then we link the alias to english page or if it is in french we can link it to french page. can I try like this? or if there is any other ways please share.
