Description

Uploading a file larger than ~8 Mb leads to the following message: An error occurred while performing the request. With suggested comments: 1. Did you complete the Tiki Installer? 2. Is your database corrupt? Please see how to repair your database 3. Are your database credentials accurate? (username, database name, etc in db/local.php).

With smaller files there is not problem. I tried at two different time, but after 40~45 sec. the error occurs.

My Tikiwiki installation seems to limit file size around 128 MB.

In the file php.ini I set both max_execution_time and max_input_time to 60.

Since nowadays 8Mb for files is common, this bug is really limiting the functionality of file gallery.
