Description
    Many ISP's have separated pop/imap and smtp accounts. Or just they require SMTP auth when
    sending email outside ISP networks.

    Just to be sure :
    User may have separated incoming(pop3/imap) and outgoing(smtp) accounts
    or
    User may have one account for incoming&outgoing (pop3/imap/smtp)

    Both cases should be supported and with ssl support.

    Current (v9.1) webmail implementation does not allow separated pop/imap and smtp account
    settings. Also SMTP is missing ssl possibility.

    So in these cases webmail is unusable.

    thanks

Solution
    Add possibility to webmail settings to configure smtp account if needed.
    Selections same than incoming / configure smtp auth separately.
    And naturally webmail should support pop/imap/smtp over ssl.
