Description

When creating a list of pages for a new structure with the Tree list. The Tiki stalls out and does not create the pages but dies randomly half way or three quarters of the way through the list. I then created a VM environment to test against that same version 9.1LTS and same symptom. The problem is not there under 6.3LTS. I can create the structure just fine. Then export the structure and import it into 9.1LTS. Not exactly the workaround I want.
