Description

Using the method described in documentation <http://doc.tiki.org/Clean+URLs> (Step 2: Configure Tiki to Produce Clean URLs): activating search engine friendly url and choosing 'lang' for 'List of Url Parameters that should go to the path', editing a translated page will lead (save or cancel edit) to a not properly recognized pathname with /xy/ in it, where xy is the two letter language code.

Solution

There is a hint in the documentation: *This setting requires you adapt your .htaccess*. An explanation how to set up .htaccess correctly might be enough to do.
