### Description

To be able to batch upload zip file to a file gallery with the file contents of the zip files that or in order.

For example.

if creating a "how to" page with screenshots, you save the screenshots as scr01.png, scr02.png, scr03.png, scr04.png, etc following the sense of the document

When you batch upload the zip file, they are randomly unzipped or assigned a file ID.

scr01.png = FileID 04  
scr02.png = FileID 02  
scr03.png = FileID 01  
scr04.png = FileID 03

Therefore when editing the text, instead of typing in order

click here

img fileId="01"

type blah

img fileId="02"

click Ok

img fileId="03"

Click Finish

img fileId="04"

This current process greatly reduces the efficiency of editing a page with multiple successive file/image attachments. Instead of manually typing & logically augmenting the file ID sequentially knowing that it will be the next screenshot in order, you have to do several mouse clicks to chose the correct image/file, if you have a zip file with a hundred or so screenshots, this task becomes extremely burdensome.
