Description

I created a file gallery in my tiki installation and set all php *upload_size* etc. parameters in my .htaccess correctly. According to these parameters I can upload files up to a size of 8 MByte, which works without any problem, if I do this directly from the file gallery.

Now I try to use this file gal in a tracker via the tracker field "file". Everything seems to work well, uploads are shown with a progress indicator from 0 - 100%. But uploading quietly fails for files larger than 600 kByte.

The files are shown in the gallery, but on the server they have a size of 0 (zero) Bytes, files smaller than approx. 600 kByte work well.

To point it out, the problem is only existent from within a tracker using the new drag and drop (html5??) interface. With an older Internet Explorer, which does not show the progress indicator, uploading works well from within a tracker, too.

I cannot find a reason or a solution...thanks in advance...
