Description
This should perhaps be dealt with by Tiki contributors since it has come up before (when I upgraded in Dec. 2011 to Tiki 8.2). The issue has to do with displaying file galleries in Tiki 10.0. When I first attempted to display the file galleries, I got a blank page. A quick check of my server's error log (edited to remove private data) showed the following:

PHP Fatal error: Uncaught exception 'SmartyCompilerException' with message 'Syntax Error in template "/templates/tiki-list_file_gallery.tpl" on line 223 "{quotabar length='100' value=$smarty.capture.use}" unknown tag "quotabar" in .../lib/smarty/libs/sysplugins/smarty_internal_templatecompilerbase.php:657

Possibly related to this problem is that "/lib/smarty_tiki/function.quotabar.php" is (if memory serves) the one file in
Tiki 10.0 that I was unable to upload to the server via Filezilla FTP
transfer. There may be something wrong with the file that's causing the error message listed above, and I remember that it wasn't possible to upload this file to the server when I was upgrading to a couple of previous versions of Tiki, so it's a persistent issue.

Solution
I resolved the problem at least in my own case by simply removing the quotabar expression near the end of the file "/templates/tiki-list_file_gallery.tpl." Now the file galleries display properly. But this is just my "non-programmer" fix. As noted above, there may need to be some work done on the file

"function.quotabar.php" since that could be what's causing the problem in the first place, and I don't have the skills to diagnose that file.

Al,

I am also having v10 Gallery issues. The newest one is TIki's refusal to upload a DPF file. Sounds weird, but tested with two servers and same results. All other filetypes and filesizes seem to upload OK, but a PDF file never transfers. Circle spins for a few minutes then stops. Renaming the same file to something else, or ZIPping it, works. Are you also having that problem?
