Description

Recently, I went into Admin and turned off one of the features in Admin at tiki-admin.php?page=features. The feature was Calendar in Global Features. But that brought up a problem that I was able to investigate in my host server's error logs:

.../tiki-calendar.php

PHP Warning: PDO::query(): SQLSTATE42000: Syntax error or access violation: 1226 User ... has exceeded the 'max_questions' resource (current value: 75000) in .../wiki/lib/core/TikiDb/Pdo.php on line 78

PHP Warning: Invalid argument supplied for foreach() in .../wiki/db/tiki-db.php on line 152

PHP Warning: PDO::query(): SQLSTATE42000: Syntax error or access violation: 1226 User ... has exceeded the 'max_que ...
... /wiki/tiki-lastchanges.php

Solution

Update: None so far. I just checked my error logs and unfortunately, the same looping error messages have begun to reappear. My server host isn't happy with this situation and apparently the problem hasn't been solved — the excessive server queries keep causing the site to become unavailable until the quota resets every hour or two. I would appreciate any advice you might have!

Older:

The above is an edited snippet of the error logs, and may be what caused my site to become unavailable: too many queries had resulted, requiring an hour or so's wait until the database quota reset. What I did was go ahead and turn the Calendar feature back on. So far I am not seeing the same or any error messages in the logs, and the Tiki site hasn't become inaccessible again. I will keep monitoring the issue, but at present it seems like turning Calendar on may have dealt with it.
